ACKNOWLEDGEMENT

The Food, Medicine and Healthcare Administration and Control Authority (FMHACA) of Ethiopia would like to extend its gratitude to the World Health Organization (WHO) for its technical assistance, meeting all financial expenses associated with the consultative workshops and printing of the List of Essential Medicines for Ethiopia. The Authority would also like to thank Management Sciences for Health/Strengthening Pharmaceutical Systems (MSH/SPS) for its technical support in revising this list.

Last but not least, the Authority would also like to give special acknowledgement to the National Drug Advisory Committee and all participants of the consultative workshops for their invaluable contributions in scrutinizing and finalizing this list.

FOREWORD

In most cases, healthcare services are provided both by the private and the public sectors. However, provision of basic health services usually remains to be the responsibility of the public sector. This relies, among other factors, on availing the most cost-effective medicines that satisfy priority healthcare needs of the population in adequate amount, appropriate dosage forms and of assured quality at all times.

Ethiopian drug policy ensures that the government shall provide or else systematize adequate supply of medicines which are required for prevention, diagnosis, treatment, mitigation and rehabilitation of diseases affecting the majority of the country's population. Moreover, the policy emphasizes that such medicines be critically identified and classified to respective levels of health service delivery.

It is important to recognize that the National Essential Medicines List only implies that the medicines included are adequate to meet the common contemporary health needs of the general population of the country and general obligation of the government to ensure adequate availability of such drugs in the country. Whereas exclusion of any drug from this list does not necessarily mean that it is less effective in comparison to any alternative drug which has found its place in the list.

The Authority believes that this list will serve all stakeholders and health service providers as a tool for selecting and availing the most needed medicines at every level of the healthcare system at all times.

It is also strongly believed that this list has to be regularly updated so as to reflect new therapeutic opinions, management

of emerging diseases and changing resistance patterns. Hence, I call upon all health professionals and interested parties to continue their usual support in updating the list by forwarding comments and suggestions to the Food, Medicines and Healthcare Administration and Control Authority of Ethiopia through P.O. Box 5681, Tel. 251-11 552 41 22, e-mail daca@ethionet.et, Addis Ababa, Ethiopia.

Finally, I would like to express my gratitude to all those who have directly or indirectly extended their helping hands in the revision and printing of the list.

YEHULU DENEKEW ALAMNEH

Director General,

Food, Medicines and Healthcare Administration and
Control Authority (FMHACA) of Ethiopia

INTRODUCTION

Provision of promotive, preventive, curative and rehabilitative health services require regular availability of relevant medicines of proven safety, efficacy and quality at an affordable price and their proper use; including proper diagnosis of health problems, prescribing, and dispensing to patients.

Essential medicines are those that satisfy the priority health care needs of the population. They are selected with due regards to public health relevance, evidence on safety, efficacy, quality and comparative cost-effectiveness. They are intended to be available within the context of functioning health systems at all times in adequate amount, appropriate dosage forms with assured quality.

Essential Medicines List is meant to guide the selection, procurement, production, distribution and storage of medicines. It can also serve as an informational and educational tool for health care professionals involved in diagnosis and treatment of diseases as well as dispensing of medicines. Furthermore, it can improve availability and promote rational use of medicines.

The Government of Ethiopia, through its drug policy, has reaffirmed its commitment to provide or else systematize the supply of medicines that adequately meet the common contemporary health needs of the general population of the country. Thus, to materialize this objective, it is necessary to select medicines which are required for promotion, prevention, diagnosis, treatment/mitigation and rehabilitation of diseases affecting majority of the population.

A draft of the revised fourth edition of the Essential Medicines List was first prepared by the Authority using a technical working group composed of an internist, a nurse and pharmacists and then enriched through national consultative workshops. Participants involved in the workshops were specialists and professionals from various disciplines i.e. Nursing, Pharmacy, Cardiology, Dentistry, Dermatology, ENT, Internal Medicine, Neurology, Obstetrics & Gynecology, Oncology, Ophthalmology, Pediatrics, Psychiatry and Surgery; representatives of teaching institutions, professional associations, regional health bureaus, relevant departments of Ministry of Health, pharmaceutical manufacturers & importers, government hospitals and other related organizations(See Annex 1). The revised Essential Medicines List was then finalized by the National Drug Advisory Committee.

During the revision process, several factors like safety, therapeutic efficacy, quality, affordability and availability were taken into consideration. Most of the essential medicines which are included in this list are formulated as single compounds. Whereas fixed dose combination products have been selected only when the combination has a proven advantage over single compounds administered separately with regard to therapeutic efficacy, safety, and adherence or combating drug resistance. The generic or international non-proprietary names for medicines have been used and they have been arranged according to pharmacotherapeutic classifications.

The list of essential drugs does not imply that other drugs are not useful. It simply implies that in a given situation these drugs are the most needed for the population and therefore should be available at all times in adequate amount at reasonable cost; moreover such lists are subject to periodic modifications.

The Essential Medicines List for Ethiopia will be updated from time to time following changes in disease patterns and recent developments in the health sector. Therefore, all users of this list are kindly requested to send their comments and suggestions to the Food, Medicine and Healthcare Administration and Control Authority of Ethiopia, P. O. Box 5681, Tel., 251-11 552 41 22, e-mail daca@ethionet.et, Addis Ababa, Ethiopia.
