## **ACKNOWLEDGMENT**

The Drug Administration and Control Authority (DACA) of Ethiopia would like to extend its gratitude to the world health organization (WHO) for meeting all the financial expenses associated with the printing of this list. It also thanks all participants of the workshop for their valuable contribution.

## **INTRODUCTION**

The provision of complete Animals health care necessitates the availability of safe, effective and affordable drugs of the required quality, in adequate quantity at all times. Moreover, the available drugs must be presented, dispensed and used rationally.

The Ethiopian drug policy which was issued on November, 1993 has reaffirmed the commitment of the Ethiopian Government to this principle. Our National drug policy gives priority to selection of drugs based on the country's Animals health problems, trained manpower, financial resources, Infrastructure with full consideration of safety, efficacy, quality and cost.

Guided with this principle this National drug, list is prepared with wide consultation and discussions made with professionals in medicine, pharmacy and other related fields.

It is hoped, that the national drug list will serve as useful guide for procurement, distribution and prescription of drugs in the country.

The presentation of this list alone does not solve the country's problem in procurement, distribution, use and handling of drugs unless all the concerned bodies commit themselves to its full implementation and exercise

The development of a National drug list is an ongoing process. Hence, the list will be subjected to continuous deletion and inclusion: as the pharmaceutical industry introduces new medicines, they will be critically evaluated in terms of, interalia, their potential to improve safety and efficacy, better patient compliance and other drug qualities.

Therefore, evidence based comments and suggestions are welcome and can be sent to the Drug Administration and control Authority of Ethiopia P.O.Box 5681. Addis Ababa, Ethiopia.
